

What's New in FedEx Ship Manager® v.3200

Experience the difference

FedEx Ship Manager v3200 offers enhancements in the shipping process that provide an improved customer shipping experience with accuracy, better tracking, convenience and regulations. The latest enhancements make your dangerous goods shipping more efficient and result in a smarter shipping experience. Through continuous improvement, FedEx Ship Manager aims to cater to all your logistic requirements and facilitates a best-in-class shipping experience.

FedEx Ship Manager Enhancements

Post Shipment Document Upload enhancement to FedEx® Electronic Trade Documents enables you to upload your trade documents any time after completing your shipment and before the courier arrival or drop-off.

Automatic Tracking (Auto Track) feature allows you to designate high priority shipments for which you wish to receive automated tracking status updates.

FedEx OnSite enables you to ship to additional locations that are not owned by FedEx providing better convenience, extended hours and secured package storage.

Loose Dry Ice “Dangerous Goods” enhancement enables you to use the loose dry ice as a coolant in an overpack or All Packed In One (APIO) and ship dry ice at the package level for both international and non-US domestic shipments. This enhancement provides you with the most accurate dangerous goods information and makes your dangerous goods shipments more compliant with regulations.

FedEx International Controlled Export (FICE) service is now applicable for FedEx International Priority®, FedEx International Priority® Freight and FedEx International Priority DirectDistribution® services. FICE supports your exports originating from US and Puerto Rico and streamlines customs clearance by initiating regulatory clearance while your shipments are en route. The FICE service facilitates faster delivery and reduces the risk of customs delays.

Label Size enhancement allows FedEx Ship Manager to support additional PDF label sizes of 4x6.75, 4x8, and 4x9 for printed labels.

Address Book Verification Enhancement enables you to apply address checker to an entire address book instead of one address at ship time. This will help to resolve address issues prior to shipping thus providing faster speed to label, fewer address corrections and fewer late deliveries.

End of Support for Windows Vista operating system in FedEx Ship Manager as of January 2018.

FedEx® Integration Assistant Enhancements

LTL Batch Dialog Defaults feature includes the account number with a drop down of configured LTL accounts, Payment type, Payment terms, Service Type and Guaranteed Service. These additions allow for inbound, outbound and third party shipments, without having to create different profiles for each with complex mapping in each profile.

Progress Bar and Timer Control will keep you updated regarding the data loading status. FedEx Integration Assistant has added prompts to make it easier to select the data you wish to use.

Print BOL Indicator allows you to automatically print the BOL for your shipment.
